Allowable Subject Matter

1. Claims 1-50 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art, alone or in combination, does not teach or fairly suggest a residential gateway that receives and decodes signals from a telecommunications network and that transmits the decoded signals to a plurality of devices, including multiple televisions, in which the residential gateway has a plurality of decoders for decoding at least one series of video packets into at least one television signal in response to a channel select command, and in which the residential gateway has a receiver for receiving the channel select command from a remote control device associated with a television.

The most applicable art of record, the Hylton et al (5,708,961) reference, cited herewith, discloses a wireless residential video distribution system having a shared processing system connected to a digital broadband network in an arrangement somewhat analogous to applicant's residential gateway. The reference differs from that claimed in that decoding takes place at set-top terminals and not at the shared processing system. Although the reference discloses centralized processing at a local point of distribution, including centralized decryption, there is no teaching or suggestion for centralized decoders. In fact, the Hylton et al reference's particular brand of channel and program selection, followed by multiplexing in order to facilitate transmission using spread spectrum modulation, is made possible due to the packetized nature of the encoded data streams. Consequently, the reference teaches against a modification which would centralize the decoder functions.

Art Unit: 2611

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
